

HEATING ANYTIME ... ANYWHERE

Enjoy the outdoors all year round with new energy-efficient heating options

Although the temperature outside may be falling, new types of outdoor heaters are enabling families to enjoy outdoor entertaining all year round. Heatstrip® Classic is a stylish electric radiant heater that provides even and comfortable heat.

With a distinctive slim profile and black face, the Heatstrip® Classic blends elegantly into your décor. It is one of the most energy-efficient heaters available in Australia with running costs starting from just 30 cents per hour*.

Anywhere around the home is an ideal location for Heatstrip®, including houses and apartments with undercover outdoor living and alfresco dining areas such as barbecue zones, patios, verandahs, courtyards and

balconies. They can even be installed under an umbrella.

New accessories allow Heatstrip® Classic to be flush-mounted in a ceiling for a high-end, streamlined look, and when an area has high ceilings, they can be lowered with extension poles and suspension chains. A range of other mounting options are also available depending on the layout of the area to be heated and type of overhead structure.

Following its popularity in coastal areas, Heatstrip® Classic now has superior corrosion protection by way of its anodised alloy casing, making it ideal for all locations. Heatstrip® has no internal moving parts, ensuring a silent and maintenance-free operation. An optional timer provides reassurance of automatic switch off and

temperature control.

These low-cost, stylish outdoor heating units may have been available both locally and internationally for several years, but it is only now with the hefty increase in utility prices that their benefits have truly taken on increased significance. There is also the added benefit that Heatstrip® heaters are now available from retail outlets rather than just trade centres, ensuring more people can appreciate their low cost and comfortable radiant heat.

Australian manufacturer, supplier and exporter, Thermofilm Australia, is now turning up the heat another notch with the Heatstrip® Max. This is a completely new heater in the Heatstrip® range that is suitable for outdoor sites permanently exposed to the weather and not undercover.

In addition to areas such as open courtyards and verandahs, the Heatstrip® Max is ideal for beer gardens, verandahs and any alfresco areas not fully protected from the weather, including coastal locations or where a more intense heat is required.

A unique feature of the high-temperature infra-red heater is Heatstrip® Max's low-glow incoloy element. Like all heaters in the Heatstrip® range, this unique element is Australian designed, engineered and assembled. Traditional infra-red elements have a blinding glow that is not only distracting and obtrusive, but wastes energy. While Heatstrip® Max has a heat output of up to 680°C, it is very energy efficient compared to other options.

Another advantage of the dual-element Heatstrip® Max is its ability to be used on ceilings up to 3.5 metres high. Built to commercial-grade quality, it comes with ceiling, wall, chain/wire and pole-suspension mounting options and can be supplied with a lead and plug for easy DIY installation**.

All Heatstrips are fully designed, engineered and assembled in Australia, for Australian conditions. Recommended retail prices start from \$529 for a Heatstrip® Classic 1500-watt model and \$799 for a Heatstrip® Max 2400-watt model (which is 20 per cent less than high-glow imported products). All Heatstrip® heaters come with a two-year full replacement warranty for residential applications.

In addition to trade outlets, Heatstrip® from Thermofilm Australia is now available nationally at Barbeques Galore, Masters, Stratco, as well as specialty outdoor living, electrical and heating stores. A full list of stores is available at www.thermofilm.com.au ■
