

WINTER WARMTH

Innovative and versatile heating solutions for your outdoor living space

The sleek and low-cost outdoor heating units, Heatstrip®, may have been available both locally and internationally for years, but it is only now with the hefty increase in utility prices that its benefits have truly taken on increased significance. This, and the added benefit that Heatstrip® heaters are now available from retail outlets rather than just trade centres, will ensure that more people can appreciate the low-cost and comfortable radiant heat that comes from Heatstrip®.

Australian designed and manufactured by Thermofilm, the Heatstrip® electric radiant heater has an operating cost that is less than 15 per cent of the cost of bottle gas "mushroom" heaters. When also compared to gas heaters, Heatstrip® doesn't take up valuable floor space or give people the "red flush" when sitting close by. Furthermore, Heatstrip® doesn't take long to start producing heat, with models from 1500 up to 3200 watts. With no moving parts, they can be ceiling-mounted, wall-mounted and even installed under an umbrella.

A key feature of the Heatstrip® is its attractive, sleek and stylish design. It is the only outdoor heater on the market that actually looks good and can add value to a property. Anywhere around the home is an ideal location for Heatstrip®, including houses and apartments with undercover outdoor living and alfresco dining areas such as barbecue areas, patios, verandas, courtyards and balconies.

With DIY installation on three of the four models, Heatstrip®

heaters come with a two-year warranty and an optional timer that provides reassurance of automatic switch off. The running cost is approximately 48c per hour for the most popular model (2400 watts) compared to the average \$3.15 per hour cost of bottle gas heaters. The running cost on a 1500-watt model costs approximately 30c per hour.

Heatstrip® heaters are also used by a wide range of commercial venues to provide warmth for staff and customers. Restaurants, pubs, clubs and wineries now utilise their outdoor areas day and night through all seasons. In Canada, heatstrips are even installed in bus shelters!

There are hundreds of installations of Heatstrip® around the globe from Europe and South Africa to Asia and the USA. Specific locations include Jamie Oliver's restaurants, Melbourne's Crown Casino complex, McDonald's restaurants and Westfield shopping centres. All are taking advantage of this energy-efficient and attractive heating system. ❄️
